Laminator Controls Upgrade

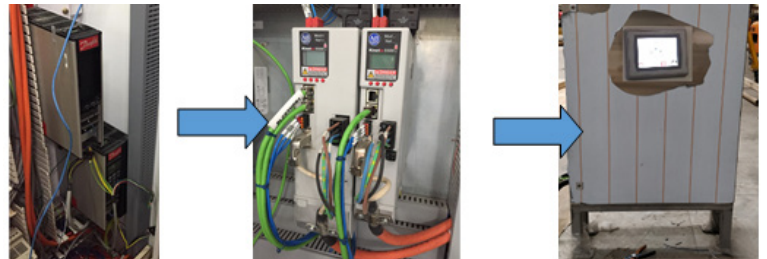

ACCURATE SHEET THICKNESS

Spooner Vicars has developed the Laminator Controls Upgrade Kit. Upgrading the obsolete parts of an existing line will improve the efficiency levels and increase the life of machine.

Replacing the existing obsolete Danfoss Servo drives on the Laminator Table with the latest AB Kinetix 5500 System will give greater flexibility with easier comms and extended component life. The existing servo drives used to move the laminating table and compensating conveyor are replaced by a newer Allen Bradley servo system using single cable technology.

FEATURES & BENEFITS

- Pre-tested, proven technology
- Minimal changes to existing equipment setup.
- Quick, Easy & Clean integration
- User Friendly operator interface.
